

NLNG, Liquid natural gas compression Nigeria

Commissioning for ABB Egypt

Project Description

Nigerian LNG is the third largest LNG producer in the world. To drive the powerful liquefaction compressors ABB has delivered six 9 MW medium voltage drives and motors in 2001. Each of them with complementary transformers and 132 kV and 33 kV GIS switchgears.

During the power upgrade project initiated in 2015 the power of the drives, motors and new transformers was further increased to 14 MW.

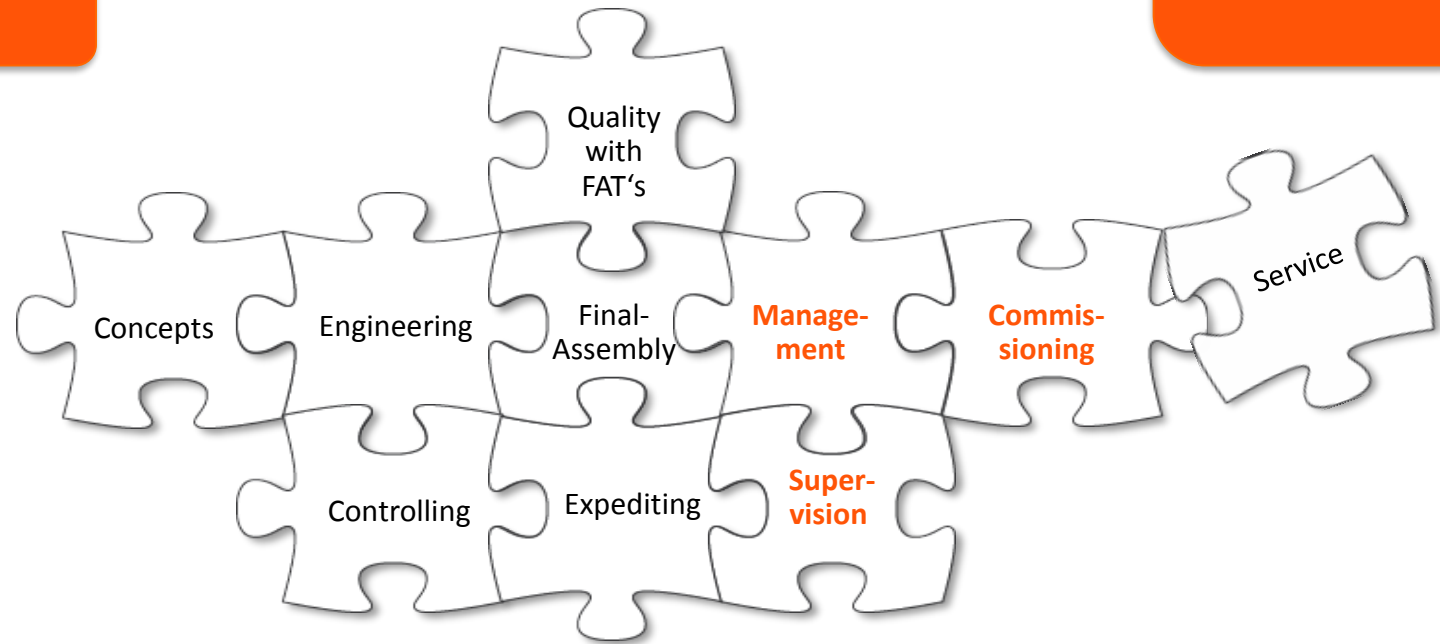

Role of INP Switzerland

INP supported ABB in the commissioning of the GIS, transformers and the drives, coordinated the on site project management and carried out on-site product training for customer's field personal.

INP's field service engineers are highly specialized and certified on ABB MV drive products.

Smart E-Engineering Services

Flexibility throughout the project

- Installation supervision
- Support during commissioning
- Creation of the transfer dossier
- Schedule and quality control
- Final documentation
